

# BESTVEND™

## The Possibilities Are Endless.

The first auto-configurable inventory control system designed to control what, where, and when you want, at the exact quantity required.

With fixed-function cabinets, your inventory not only has to fill the cabinet, but conform to its control limitation—leaving items without adequate control or in the wrong physical space at the wrong time. But not with our **BestVend™** vending services. The Inventory Management software analyzes your entire indirect materials inventory and uses advanced algorithms based on over a trillion inventory transactions to give you recommendations to optimize your inventory control—including the tools to let you make changes based on your personal insight. **BestVend™** was created with an intuitive interface that delivers flexibility.

# You're In Control With **BESTVEND™**

Every **BestVend™** vending system is individually configured to meet your requirements. Whether you're looking for a low cost system to manage a handful of critical items or an extremely dense workstation to control thousands of SKU's, **BestVend™** systems can be configured to maximize efficiency. Each system is configured individually to meet specific needs.

Whether you're a hospital, large university or a commercial facility with an evening and/or night crew the BestVend system is perfect for you.
