1-1/2" Tub Drain Removal Tool

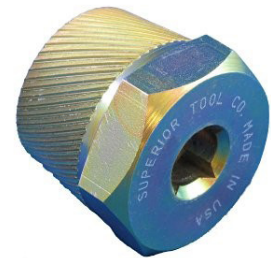

#99525699

When the crosshairs on your old tub drain are corroded and/or missing and the average drain removal tool fails, use the Tub Drain Extractor™ to remove those stubborn 1-1/2" tub drains.

Never again will you need to chisel and hammer out the old drain and risk cracking the tub. This time saving tool does all the work with its helical knurl design. Simply drop the tool in the drain and turn it counterclockwise with a 1/2" ratchet drive and extension or wrench. The more torque that is applied to the tool the more it will "bite" into the drain and it will not slip. It's that simple.

- With a 1/2" ratchet drive the tool removes any stubborn 1-1/2" tub drain
- The Unique Helical Knurl bites into the drain and will not slip.
- More torque equals more bite!

MADE IN THE USA!

Foldable Magnesium Anode Rod

#60069

The anode rod sacrifices itself to protect the tank. As it deteriorates it should be replaced, or the tank will corrode and eventually leak. Check your anode rod every 2 years as the anode rod's life depends on a few variables, including water quality, tank use, water temperature, and tank quality. The Water Heater Smart Blue Lightning anode rod will help avoid early tank failure. The segmented design allows for replacement in tight spaces. The anode rod can be cut in length to fit short water heaters. The Blue Lightning rod is made of environmentally-friendly Magnesium, with durable, corrosion-resistant, stainless steel links.

Magnesium | 4 flexible sections for easy installation | Lead Free Alum Zinc | 42 Length | Hex Head plug with 3/4 NPT connection
NSF 61 Compliant | Easy to install in tight places
